No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1986 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

WINNIFRED BERG CUTLER, GEORGE PRETI, ABBA KRIEGER, GEORGE R. HUGGINS, CELSO RAMON GARCIA, AND HENRY J. LAWLEY. Human Axillary Secretions Influence Women's Menstrual Cycles: The Role of Donor Extract from Men 463

George Preti, Winnifred Berg Cutler, Celso Ramon Garcia, George R. Huggins, and Henry J. Lawley. Human Axillary Secretions Influence Women's Menstrual Cycles: The Role of Donor Extract of Females 474
Steven M. Pomerantz, Robert W. Goy, and Marc M. Roy. Expression of Male-Typical Behavior in Adult Female Pseudohermaphroditic Rhesus: Comparisons with Normal Males and Neonatally Gonadectomized Males and Females 483
Author Index for Volume 20 501

INFORMATION FOR AUTHORS

Hormones and Behavior publishes a broad range of original articles dealing diversely with behavioral systems known to be hormonally influenced. The scope extends from studies of the evolutionary significance of hormone–behavior relations to those dealing with cellular and molecular mechanisms of hormonal actions on neural tissues and other tissues relevant to behavior. The use of behavior as a major dependent or independent variable is not essential, although such studies continue to be welcome in the journal.

A paper will be considered for publication with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. All manuscripts are evaluated by two or more members of the Editorial Board or *ad hoc* reviewers.

Articles and any other material published in *Hormones and Behavior* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher. Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher shall not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscripts. Authors should submit four neat, typewritten, double-spaced copies of their manuscripts, along with four legible copies of tables and figures. Please use $8\frac{1}{2} \times 11$-inch white paper and leave ample margins. Number pages consecutively. Do not number the title page or the abstract. Place tables, figure legends, and figures at the back of the manuscript; do not put page numbers on this material.

The title page should include the following items: (1) full title; (2) running title not to exceed 35 letters and spaces; (3) name and address of person to whom proofs and other correspondence should be mailed.

The abstract, on a separate page following the title page, should not exceed 250 words. It should consist of a concise statement of the problem and the results.

Begin each manuscript with an introduction (no heading) and then, insofar as possible, follow the standard sequence of descriptive headings: METHODS, RESULTS, DISCUSSION, ACKNOWLEDGMENTS, and REFERENCES.

Manuscripts should be sent to:

Dr. Robert W. Goy
Editor, *Hormones and Behavior*
Wisconsin Regional Primate Research Center
1223 Capitol Court
Madison, WI 53715-1299, U.S.A.

Tables. Type each table on a separate sheet and head it with a descriptive title. Number tables consecutively with Arabic numbers in order of their mention in the text. Measurements should be expressed in metric units and should be abbreviated and unpunctuated in tables, figures, and text. Footnotes in tables should be indicated by lowercase italic superscript letters.

Illustrations. Prepare *line drawings* (graphs, histograms) with black ink on white paper. Camera-ready copies of figures—either the original artwork or glossy, high-contrast photographs—need not be supplied until a manuscript has been accepted; final copies of illustrations should be marked on the back with figure number, name(s) of author(s), and

name of journal. All illustrations and lettering should be of high enough quality to remain legible following significant reduction in size. Number figures consecutively in order of their mention in the text. Prepare a descriptive legend for each figure and type the figure legends consecutively on a separate sheet. Color illustrations can be accepted only if the author defrays the cost.

Footnotes. Do not use footnotes unless absolutely necessary. Type footnotes on a separate sheet in order of their citation. Refer to footnotes by superscript numbers in the text.

References. Cite references in the text by giving the surname of the author followed by the date of publication [e.g., "Smith (1982) found that . . ." or "However, contrary results have been reported (Brown, 1984; Jones and Brown, 1985)."] When a reference has two authors, always cite both names. When there are more than two authors, the surnames of all authors and the date of publication should be cited at first mention; in subsequent citations of the same reference, mention the first author only, followed by *et al.* and the date. If citing more than one publication by the same author in the same year, add suffixes a, b, c, etc. after the year of publication, and follow the same pattern of identification in the bibliography. Under REFERENCES, arrange the publications cited in the text alphabetically, according to the surname of the first author. The name(s) of the author(s) is followed by the year of publication, the full title of the article, and the name of the journal or book. Book titles are spelled out completely; journal titles are abbreviated according to *Index Medicus* or *Serial Sources for the BIOSIS Data Base*. Note the following reference styles.

Balthazart, J. (1983). Hormonal correlates of behavior. *In* D. S. Farner, J. R. King, and K. C. Parkes (Eds.), *Avian Biology*, Vol. III, pp. 221–365. Academic Press, New York.

Dufty, A. M., Jr., and Wingfield, J. C. (1986). The influence of social cues on the reproductive endocrinology of male brown-headed cowbirds: Field and laboratory studies. *Horm. Behav.* **20,** 222–234.

Radioimmunoassays. Unpublished radioimmunoassays or significant changes in existing methods should be described in detail. All assay data should be accompanied by statistical validation (e.g., inter- and intra-assay variance).

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. The corresponding author will receive 50 free reprints; additional copies can be ordered. A reprint order form will accompany the proofs.
